

REVEGETATION PLANNING AND IMPLEMENTATION

LILBURN
CORPORATION

Planning and designing the reclamation and revegetation of land is an integral part of project permitting in California. Many land uses are intense and therefore have a substantial effect in changing a property's topography and landscape. Often these projects, such as mining, are operational for decades and reclamation planning is a matter of good design based on expected future conditions. Lilburn Corporation staff have experience in reclamation and revegetation planning since the late 1970's.

Outplanting of salvaged plants.

Revegetation Planning requires sound documentation or knowledge of pre-project conditions and the incorporation of plants that will have a high survivability rate based on the site's conditions. Our resource specialists have many years experience working with sites in the deserts, mountains, and alluvial valleys. We have implemented revegetation plans with high success rates.

Revegetation activities

- Baseline Data Collection
- Top Soil Salvage
- Seed Collection
- Plant Salvage
- Seeding
- Monitoring

REPRESENTATIVE PROJECTS

- Mitsubishi Cement Corporation, Cushenbury Mine
- CEMEX Lytle Creek, Aggregate Mine
- CEMEX Redlands, Aggregate Mine
- US Gypsum, Plaster City Mine
- Granite Construction Company, Indio Mine
